

Sarcotropin® Pro

WITH PEPTIDE BLEND

A Smarter Solution to hGH Stimulation

Clinically Based. Hormonally Balanced.

- Utilizes dopamine's known GH-stimulatory role, backed by endocrinological practice.*
- Levo-DOPA, the key ingredient, crosses the blood-brain barrier for effective GH release.*
- Includes anti-aging dipeptides for cognitive, muscular, and metabolic support.*

Sarcotropin® Pro by Prosoma offers a comparably effective yet more affordable alternative to injectable Somatotropin. Its principal growth hormone (GH) secretagogue is dopamine, a compound already used by endocrinologists in diagnostic stimulation of GH release in both pediatric and adult populations.*

Unlike dopamine, which cannot efficiently reach the brain due to its poor oral bioavailability, Sarcotropin® Pro leverages L-DOPA, a naturally occurring precursor derived from *Mucuna pruriens*. This amino acid crosses the blood-brain barrier, converts to dopamine in the brain, and stimulates Growth Hormone-Releasing Hormone (GHRH), ultimately increasing endogenous hGH output. The formula also contains L-arginine, which enhances GH stimulation via agmatine interaction with alpha-2 receptors.*

To support broader anti-aging benefits, Sarcotropin® Pro is fortified with carnosine and anserine—two neuroprotective and muscle-enhancing dipeptides known for their antioxidant and anti-inflammatory properties. Together, these compounds deliver a synergistic formula to support endocrine, cognitive, and physical health.*
